THE SATURATED FAT GUIDE

the wellnesswatchersmd team and kerry friesen, m.d., medical director

Saturated Fats

In countless studies run over the last few decades, saturated fat and cholesterol have shown the most consistent association with CVD mortality. In one study, called the Seven Counties large populations were studied based on, among other things their saturated fat intake. Saturated fat intake varied from 20% to <10% of energy and the study involved over 12000 men from 16 populations. It was found that there was an almost one to one correlation between a diet in high saturated fat and the risk for coronary heart disease.

For this reason we provide the following list of...

The 500 Worst Foods You Can Eat

The Index is the Number of Grams of Saturated Fat per 200 calories
